

## ***EVOK CYLINDER KIT FOR YAMAHA N-MAX 125***

***100081300 - 100091300***

For a correct assembly of the cylinder kit we recommend to rely on this guide.

### **Position of the rings from the top:**

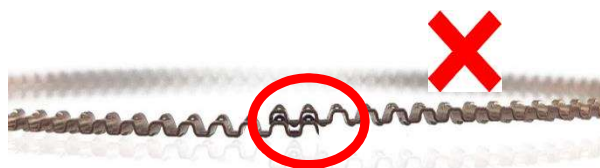

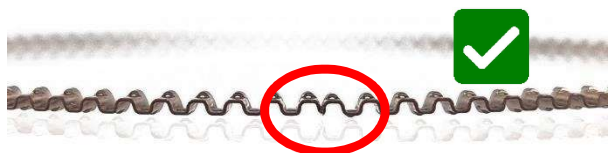

1° Ring marked as **1T**

2° Ring marked as **2T**

3° 2 thin rings and oil scraper

### **Oil scraper assembly:**

Place the marked rings (1T;2T) surface upwards , with the open side staggered 120° one from the other. Place the piston with the “•” mark aimed to the exhaust valves

### **Recommended tightening torque:**

Cylinder head bolts: 22 Nm – 2,2 Kgm

Cylinder head valves cover bolts: 10 Nm – 1 Kgm

After mounting the cylinder kit, we recommend driving 1000 km without straining the engine, so as to carry out the running-in procedure correctly.

RMS declines all responsibility for damage to things or persons resulting from incorrect assembly.

This guide doesn't replace in any way the official technical manual supplied by the manufacturer.
